Australia student interview guide

Syed Awais Mehmood Hashmi

Simple English version based on your reference statement | 29 September 2026

This guide follows the main reasoning and topics in the statement you supplied, using your personal details. Practise in your own words. Source numbers are for preparation. [CONFIRM] marks information you still need to provide. Read the linked course comparisons before describing them as your own research.

Introduction and family

1. Tell me about yourself.

My name is Syed Awais Mehmood Hashmi, and I was born on 31 August 2000. I am married and come from Pakistan. I completed my software engineering degree in 2021 and have built experience in technical support, software development, systems and automation. I now work as an Automation Engineer at Nomad Internet. I want to study the Master of Information Technology in AI and Data Science at Murdoch University so that I can build more advanced solutions and develop my career in Pakistan.

2. Tell me about your family.

My father, Aftab Nasir, runs AMZ Aluminiums, and my mother is a government employee. I have two sisters. My eldest sister, Mariam Aftab, has a master's degree in Human Nutrition and is employed. My other sister has a software engineering degree and is a homemaker. I am married. My father is my sponsor for these studies.

Education and work experience

3. Can you explain your earlier education?

I completed my SSC in 2015 through FBISE Islamabad, with 675 out of 1,050 marks. I completed my HSSC in 2017 through the same board, with 583 out of 1,100 marks. I then studied Software Engineering at Capital University of Science and Technology. I completed the degree requirements on 5 October 2021, with 134 credits and a CGPA of 2.68 out of 4.

4. How does it relate to your previous studies?

I completed my Bachelor of Science in Software Engineering at Capital University of Science and Technology, Islamabad, in October 2021. My CGPA was 2.68 out of 4. I studied programming, databases, statistics, Artificial Intelligence and Natural Language Processing. These subjects gave me a base. The master's will help me build on that base and use it for more advanced data and AI work.

5. What have you done since finishing your degree?

I have been building my career since 2021. I worked at Lead Company until June 2023, first in technical support and then in software engineering. I joined Nomad Internet in July 2023. I moved through software operations, technical operations and management roles, and became an Automation Engineer in August 2025. This work helped me identify the AI and data skills I now want to develop.

6. How does it relate to your work experience?

At Lead Company, I worked in technical support and then as a Junior Software Engineer. Since July 2023, I have worked at Nomad Internet and progressed into an Automation Engineer role. I have used n8n, APIs and webhooks to connect systems for payments, refunds, devices and reporting. I understand how business systems work. I now want stronger skills in using the data inside those systems.

7. What projects show your experience and interest in this field?

At Nomad Internet, I have worked with n8n automations, APIs and webhooks to connect company platforms. The workflows covered billing, payments, refunds, device management, returns, shipping, alerts and reports. I have also worked on internal dashboards, tools and system connections. This experience showed me how much useful data businesses already have. I want to learn how AI can use that data to find problems and improve decisions. Any project examples I share must respect my employer's privacy.

8. What is your English test result?

I took PTE Academic on 2 September 2026. My overall score is 64: Listening 62, Reading 68, Speaking 64 and Writing 57. The report shows validity until 2 September 2028. I will continue practising spoken and written English so that I can take part confidently in class and complete assignments.

Reasons for further study

9. Why do you want to study abroad?

I want to build on the education and work experience I already have in Pakistan. Studying abroad can give me access to a different learning environment, practical facilities and ideas from people with different backgrounds. AI and data science are used around the world, so I also want to improve how I communicate and work with international teams. My aim is to gain skills I can apply to real business problems, then bring that knowledge back to Pakistan.

10. Why did you choose this course?

My software engineering degree taught me programming, databases and how to build software. My work then showed me how much a business can improve when its systems work together. I now want to learn how AI and data science can make those systems smarter. For example, they can help group customer requests, find unusual payments and predict service problems. A master's will give me deeper knowledge of these methods, along with project management and research skills. It is a clear next step from my current automation work towards building more advanced business solutions.

11. Why study now if you already have work experience?

My experience has helped me understand real business problems. I can connect systems and automate tasks, but I want deeper knowledge of how AI models learn and how to test their results. Studying now will let me link classroom ideas to problems I already understand. I can then return to work with stronger skills instead of relying only on trial and error.

12. Why not learn AI only through short online courses?

Short courses can help me learn a specific tool, and I see value in them. However, I want a full study plan that connects data, AI, project work and professional practice. I also want regular feedback and the chance to work with other students. A master's can give me that structure, while short courses can still help me keep learning new tools.

13. How does it relate to your future plans?

I want to return to Pakistan and build a career in AI, data and automation. Businesses need people who can turn data into useful decisions and working tools. My current experience helps me understand their systems and daily problems. The master's will help me add machine learning and data analysis to that experience. I would first target technical roles, then move towards leading teams and larger projects. In the long term, I want to help Pakistani businesses serve customers better and reduce time spent on repeated manual work.

14. Can you give a clear example of how AI could improve your work?

I have experience with customer-service and billing workflows. One future idea is a system that reads a customer request, groups it by topic and sends it to the right team. Another is finding unusual billing records for a person to review. I would test the system with sample data and keep human checks for important actions. These are ideas I want to develop, not claims that I have already built them.

Course structure and learning

15. What course will you study in Australia?

I plan to study the Master of Information Technology, course code M1220, at Murdoch University in Perth. My major is Artificial Intelligence and Data Science. It builds on my software engineering degree and my work in automation. My aim is to learn how to build systems that can use data and AI to solve business problems.

16. What do you know about the course structure?

The standard course is two years full time and has 48 credit points. The sample plan has four main semesters, normally with 12 credit points each. It starts with IT, Python and data foundations, then moves into analytics, machine learning and AI. It also includes a final project. I will follow the subject order and dates approved for my own intake. [1]

17. What subjects will you study?

The subjects that matter most to my goals are Machine Learning, Artificial Intelligence, Data Analytics and Data Resources Management. I also want to study Business Analytics so I can link technical work to business needs. IT Project Management will help me plan larger projects. The final IT Capstone Project will let me bring my learning together in a practical piece of work. [1]

Semester 1

IT Professional Practice; Information Systems Principles and Practice; Python Programming Principles and Practice; Data Science Applications.

Semester 2

Information Technology Project Management; Foundations of Data Science; Business Analytics; Data Resources Management.

Semester 3

Applied Information Security Management; Machine Learning; Information Technology Research Methods; Artificial Intelligence.

Semester 4

Data Analytics; Interactive Data Visualisation and Simulation; IT Capstone Project; one specified elective.

This is the Semester 1 2026 sample plan, with 12 credit points per semester. Your intake and prerequisites may change the order. [1]

18. What skills will you gain?

I want to learn how to collect and clean data, find useful patterns and build AI models. I also need to test how accurate those models are and explain their results clearly. The course will help me connect these skills with project planning and information security. Working on projects with other students should also strengthen my teamwork, communication and problem-solving skills. Together, these skills will help me build useful systems and explain their value to managers and clients.

19. What project would you like to build during the course?

One idea is an AI tool that sorts support requests and flags urgent problems. I would use suitable public or approved sample data, protect private information and measure how often the tool gets the result right. I would also compare it with a simple rule-based method. My final project would depend on the university's requirements and approval.

20. What are your course start and end dates?

My course starts on [CONFIRM START DATE] and ends on [CONFIRM END DATE], as shown on my Confirmation of Enrolment, or CoE. The standard course length is two years. I will use the exact dates on my CoE when answering this question.

21. Do you have a scholarship?

My scholarship is 15% of tuition fees. This reduces the amount my father needs to pay for my studies. I will still need funds for the remaining tuition, accommodation, food, travel and health insurance. I will follow the scholarship conditions in my offer letter.

22. What are your semester, annual and total tuition fees?

Using Murdoch's published 2026 fees and my 15% scholarship, the estimated tuition is AUD 15,610.25 per semester, AUD 31,220.50 per year and AUD 62,441 for two years. The annual amount before scholarship is AUD 36,730. These are planning figures. My offer letter will confirm the actual fees for my intake. [11]

Period	Before scholarship	After 15% scholarship
Semester	AUD 18,365	AUD 15,610.25
Year	AUD 36,730	AUD 31,220.50
Two years	AUD 73,460	AUD 62,441

Estimates assume equal semester loads, the scholarship throughout and no increases. Your offer letter controls the fees for your actual intake.

Reasons for choosing Murdoch

23. Why did you choose Murdoch University?

I chose Murdoch because its course matches my aim of combining AI and data science with practical IT work. My major is accredited by the Australian Computer Society. The course also has industry input, and Murdoch's IT Innovation Hub includes a working data centre and powerful computing facilities. I like having a final project where I can bring my learning together. These features matter to me because I already build business workflows and want to take that work further. The 15% scholarship also helps my family manage the cost. [11]

24. What other universities did you consider?

Curtin and Griffith were also options. Curtin's Master of Artificial Intelligence is a one-year course with a strong AI focus and an industry project. Griffith also offers a Master of Information Technology and Artificial Intelligence. I prefer Murdoch's two-year plan because I want time to build my data skills alongside AI and project management. Its subject mix and my scholarship make it a good personal fit. This does not mean the other courses are weak. [1, 20, 21]

25. What are Murdoch's rankings?

Murdoch is ranked 422nd in the QS World University Rankings 2027. It is in the 401-500 band in the Times Higher Education World University Rankings 2026. I checked both because rankings use different methods. Rankings were one part of my choice; the subjects, professional accreditation and fit with my career plans mattered more to me. [2, 3]

26. Where is the university?

I plan to study at Murdoch's Perth campus at 90 South Street, Murdoch, Western Australia 6150. I will look for accommodation with a practical route to this campus. Before I book a room, I will check the travel time and transport costs so that I can attend classes regularly. [4]

27. What is its refund policy?

I understand that a refund depends on the reason for leaving and when I withdraw. Under Murdoch's rules for a visa refusal not involving fraud, relevant fees are refunded after a deduction of the smaller of AUD 500 or 5% of the fees paid. I would need to submit the required evidence and refund request. Other withdrawal situations can have different rules. [5]

28. What is its attendance policy?

I must follow the attendance rules for each subject and make satisfactory progress. The normal full-time load is 24 credit points a year. Murdoch also requires international students to take at least two-thirds of the course face to face, with at least one face-to-face unit each compulsory study period. If illness affects my studies, I should contact the university early and provide evidence. [6]

Reasons for studying outside Pakistan

29. Why not study in Pakistan?

I completed my bachelor's degree in Pakistan, and now I want a different learning experience for my master's. I am looking for practical facilities, industry-linked study and the chance to work with students from different backgrounds. Murdoch's IT Innovation Hub and its mix of AI, data science and business subjects fit these goals. I want to learn new ways of solving problems and bring that experience back to Pakistan. My choice is based on the learning opportunities that suit me. I would not say that every local university has outdated courses or poor facilities. [1, 11]

30. Which universities in Pakistan did you research?

NUST and FAST-NUCES both offer master's programs in Artificial Intelligence. I would compare the exact subjects, practical projects and learning facilities, rather than judge a course by its title. My preference is Murdoch's combination of AI, data and business subjects, its IT facilities and the overseas classroom experience. Those features match my aim of building modern AI tools for business operations. [1, 11, 22, 23]

Comparing study destinations

31. Why not Canada?

Canada has respected universities and strong study options. For example, UBC offers a 10-month Master of Data Science. That could suit someone who wants a shorter course. I prefer Murdoch's longer plan because I want more time to develop AI and data skills alongside broader IT knowledge. I would also feel more comfortable with Perth's climate than the colder weather in many Canadian locations. The course structure, my scholarship and my personal study preferences make Australia my preferred choice. [18]

32. Why not the USA?

Cost is an important reason why I prefer Australia over the USA. For example, Boston University lists graduate tuition of US\$36,512 per semester for 2026-27, before financial aid, extra fees and living costs. That is a major financial commitment for my family. Murdoch's estimated annual tuition after my 15% scholarship is AUD 31,220.50, based on its 2026 fees. Along with the cost, Murdoch's mix of AI, data and business subjects fits the work I want to do. For me, it offers a more manageable study plan. [11, 26]

BU is quoted in US dollars per semester before aid; Murdoch is quoted in Australian dollars per year after scholarship. These are different currencies and periods. This example does not describe every US university.

33. Why not the UK?

The UK has good universities and shorter master's courses. For example, Southampton's MSc Artificial Intelligence takes one year. A shorter course could reduce the time I spend away from work and some living expenses. However, AI and data science are large subjects, and I prefer a longer period to build my knowledge, practise and complete projects. Murdoch's two-year plan suits that preference. I also need to consider the full cost of tuition and living, rather than choose a course only because it is shorter. [16]

34. Why not Germany?

My main concern about Germany is the language. I am not proficient in German, so I would need extra time and effort to learn it for everyday life. Dealing with housing, appointments and local services could be harder while I am still learning. If I chose a course taught in German, I would also need to reach its required language level before studying effectively. I prefer Australia because I can use English for both study and daily life and focus more of my time on developing my AI skills. [27]

35. Why did you choose Australia?

Australia offers the kind of education and international experience I want. Its universities operate under a national quality system, and overseas students have protections under the ESOS rules. I want to study with people from different backgrounds, share ideas and improve how I communicate in a team. At Murdoch, I can connect my studies with practical IT problems and learn in English. Australia also has a good quality of life; it ranked 15th in the 2026 World Happiness Report. These factors support my choice, but my main goal is to gain skills I can use in Pakistan. [12, 13]

Future prospects and plans in Pakistan

36. What are your future career plans?

After completing my master's, I plan to return to Pakistan and grow my career in AI and automation. I already understand business systems through my work, and the degree will help me add stronger AI and data skills. Pakistan's government has approved a National AI Policy, announced practical training and begun work towards AI hubs. I see this as a useful direction for my career. I want to help companies improve customer service, reporting and daily operations, then take responsibility for larger projects and teams. [15, 28, 29]

37. What is the scope of this field in Pakistan?

There are uses for AI and data skills in Pakistan's software companies, banks, telecom firms, online businesses and public services. The government is also expanding digital services. PITB lists projects in education, health, transport and public administration, including e-learning, hospital information systems and electronic traffic fines. These systems need reliable software, data and ongoing support. With AI training and planned hubs, I see room for people who can improve existing systems and build new tools. My background in automation could help me contribute to that work. [15, 29, 31]

38. Which government AI initiatives in Pakistan interest you?

Pakistan approved its National AI Policy in July 2025. AI Seekho 2026 adds practical AI learning, and the Ministry of IT has begun procurement for national AI hubs. It also says the National AI Advancement Initiative aims to deliver 20,000 trainings. These steps could help organisations and people use AI more widely. I want to benefit by developing the skills to build useful tools and applying for suitable roles or programs when I return. These initiatives are opportunities to explore, rather than a promise of employment. [15, 28, 29]

39. How will the course help you reach these goals?

The course will help me connect three parts of my work: reliable data, useful AI and well-managed projects. For example, a support automation could use AI to group customer messages and send difficult cases to the right person. I want to know how to test its accuracy, protect customer data and measure whether it saves time. That is a practical improvement I could bring to employers in Pakistan.

40. Which companies would you like to work for?

I would like to explore roles at Systems Limited, 10Pearls, NETSOL Technologies and VentureDive. Systems Limited offers AI and data services, while 10Pearls works on bringing AI into existing systems. That fits my experience with software connections and business workflows. Public-sector technology projects also interest me, including work linked to PITB and NITB. I would choose roles based on their requirements and the work I could contribute. These are possible employers and areas of interest, not confirmed job offers. [24, 25, 31]

41. What roles would you target?

I would first target roles such as AI Automation Engineer, AI Integration Engineer, Machine Learning Engineer or Data Analyst, depending on the skills required. My strongest starting point is combining AI with systems and workflows. With further experience, I would like to move into senior engineering, project management or team leadership. A director or chief data officer role would be a much longer-term goal that needs proven results and management experience.

42. What salary do you expect?

My current target is PKR 200,000 to 300,000 per month, based on the career plan in my SOP. It is a goal, not a promised salary or a verified market rate. The actual offer will depend on the role, company, my project work and the skills I can show. I will compare current vacancies and salary information when I am ready to apply.

43. How do you expect your career to progress?

I want to progress in stages. First, I would apply my new skills in a technical role and build a record of useful projects. Next, I would take on more system design, mentor other engineers and lead a team. Over time, I would like to manage larger AI and data projects. An overseas degree can strengthen my knowledge and profile, but my progress and pay will depend on my skills, work results and the opportunities available. I do not see senior titles as automatic rewards for completing the degree.

44. What will you do if you do not find an AI role immediately?

I can also look for software, systems integration or automation roles that use my existing experience. I would keep building relevant AI projects and apply for positions that match my skills. My goal is a steady move into stronger AI work. I do not expect the degree alone to guarantee a job or a particular salary.

Accommodation arrangements

45. What are your accommodation plans?

My current plan is to rent a room in a shared property near Murdoch or on a useful transport route. Before booking, I will check the rent, deposit, bills, travel time and rental terms. I have not confirmed a booking yet. If my wife comes with me, I will need to choose suitable accommodation for both of us and revise the budget.

46. Will you live on campus or off campus?

I currently plan to live off campus in shared accommodation. I would choose a place that gives me a quiet study space and a manageable journey to university. I will compare the total cost, including transport and bills, before making a booking. This is a plan rather than a confirmed address.

47. How much will accommodation cost each week?

My current SOP allows about AUD 220 per week for a room, which is AUD 11,440 over 52 weeks. This is only my rent estimate; food, transport and other costs are separate. I have not secured a room at this price. I will check current listings and adjust my budget to the actual accommodation I choose.

Family ties and financial support

48. Why will you return to Pakistan?

My parents, sisters, family business and property give me strong ties to Pakistan. My father is investing in my education, and I want to use it to build a stable future and support my family. I also see opportunities to apply AI to business and public-service systems as Pakistan develops its digital sector. My aim is to return with stronger skills, combine them with my work experience and grow within the local IT industry. [15, 31]

49. What properties and assets does your family own?

Our family home is owned outright and has no mortgage. Its estimated value is PKR 2 crore, approximately AUD 103,000 using the earlier estimate. I own a residential plot in Blue World City and a flat in Bahria Town Phase 8. My father also owns two residential plots. These assets and his business connect us strongly to Pakistan. His financial records will show the funds available to support my studies; property value alone is not the same as money available for tuition and living costs.

50. Who is your sponsor?

My father, Aftab Nasir, will sponsor my tuition and living costs. He runs AMZ Aluminiums in Rawalpindi. I will support this answer with his financial records and sponsorship documents. I need to be able to explain both the funds available for my studies and how he earned them.

51. What is his source of income?

My father runs AMZ Aluminiums in Rawalpindi, Pakistan. The business carries out aluminium, glass, mirror and related metal-fabrication work for residential and commercial clients. His business income is the source of my study sponsorship. The exact income and available funds must match his tax, business and bank documents.

52. What is your father's annual income?

My father's annual income is PKR [CONFIRM AMOUNT], as shown in his supporting financial records. It comes from [CONFIRM ALL INCOME SOURCES]. I will explain the figures using the same period and amounts shown in his documents, including whether an amount is business sales or his income.

53. How much money is shown in your bank statement?

The bank statement shows PKR [CONFIRM BALANCE] in the account of [ACCOUNT HOLDER'S NAME], as of [STATEMENT DATE]. These are the funds available for [CONFIRM PURPOSE]. I will also explain where the money came from and match the answer to the statements and sponsorship evidence.

54. What is the bank name and branch address?

The bank is [BANK NAME], and the account is held at [BRANCH NAME], [FULL BRANCH ADDRESS]. The account holder is [NAME AND RELATIONSHIP]. I will check these details directly from the bank statement so that my spoken answer matches the documents.

55. Will your wife travel with you?

[CONFIRM] My wife will [ACCOMPANY ME / REMAIN IN PAKISTAN]. Our plan is [BRIEFLY EXPLAIN THE TRUE ARRANGEMENT]. If she accompanies me, I will include her costs, suitable accommodation and health insurance in our plan. I will make sure my answer matches the application.

56. Will you depend on a part-time job to pay for your studies?

My funding plan is based on my father's sponsorship, not on finding a job in Australia. I will need evidence that the funds cover the required costs. If I choose to work within my visa conditions, my study commitments will remain my priority. I will not treat future wages as money that is already available.

Visa and study responsibilities

57. What visa will you apply for?

I plan to apply for the Student visa, subclass 500, to complete my course in Australia. I understand that it comes with study, health insurance and work conditions. I must follow the conditions on my visa grant letter throughout my stay. [10]

58. What is the annual living-cost amount for a student?

The current visa living-cost amount for one student is AUD 29,710 for 12 months. This is separate from tuition and travel. It is a visa planning amount, so my real expenses may be higher. I will budget for rent, food, transport, bills and other daily needs. If my wife travels with me, I will also need to plan for her expenses. [7]

59. Did you apply yourself or through an agent?

[CONFIRM] I applied through [AGENT'S NAME], OR I applied myself through ImmiAccount.

60. What is the visa application fee?

The current base visa application charge for me as a Pakistani applicant on this study pathway is AUD 2,500. This is separate from my tuition fees. Medical checks, health insurance and any additional applicant charges can add to the total cost. I will check the final amount when I submit my application. [8]

61. What will you do if your visa is refused?

I would first read the refusal reasons carefully. I would seek advice about the options available in my case and correct any issue that I could properly address. I would not assume that another application would be approved. I would also contact Murdoch about my enrolment and refund options, and continue developing my career in Pakistan.

62. What conditions must you follow on a subclass 500 visa?

I must remain enrolled in an approved course, meet its study requirements and keep my student health insurance active. For my coursework master's, I must follow the 48-hour fortnightly work limit while the course is in session. I must tell the university my address and report changes on time. I must also obey Australian laws and follow the exact conditions listed on my visa grant letter. [9, 10]

- Address: give the university my Australian address within seven days of arrival and report changes within seven days. [9]
- Insurance: maintain suitable Overseas Student Health Cover, called OSHC.
- Study: stay enrolled and meet the course attendance and progress requirements.
- Work: follow the 48-hour limit per fortnight while my coursework degree is in session; different rules apply during scheduled breaks.
- Course changes: check transfer and visa rules before changing course or provider, and obtain any required approval.
- Other conditions: obey Australian law, avoid activities that harm the community, and leave or obtain a valid visa before my current visa expires. [10]

63. How will you manage the academic work?

I understand that my bachelor's CGPA of 2.68 leaves room for improvement. My plan is to revise Python, statistics and basic mathematics before starting. During the course, I will set regular study hours, start assignments early and ask for help when I do not understand a topic. My work experience gives me practical examples to connect with the new subjects.

Sources and reference notes

Main writing reference: GTE SOP Azeem Sarwar-DESKTOP-ARR7620.docx. Its reasoning and topics guide this version. Your earlier records supply your identity, education, PTE, work, family and property details.

The reference dates from 2023. Its older fees, rankings, business statistics and job links are not treated as current evidence. Its app projects, family details, finances and salary promises are not copied as your facts. Current course details and previously checked official sources are used below.

Information needed to finish your guide

Your name, birth date, education results, PTE scores, known work history, family details, father as sponsor and 15% scholarship are already included. Please supply or confirm the following items.

1. Your offer and enrolment

Send your offer letter and CoE, including the intake, exact start and end dates, campus, tuition fees, deposit paid and the conditions of your 15% scholarship. The current guide uses 2026 estimates and a sample course plan.

2. Your sponsor and available funds

Provide your father's annual income, the period it covers, income sources, business evidence, bank balance and statement date. Also give the account holder, bank name, branch and full address. Do not use the other student's amounts.

3. Your wife and family arrangements

Confirm whether your wife will accompany you or stay in Pakistan. Provide her name and any occupation or study details you want included, along with your planned living arrangements.

4. Your accommodation

Provide the property or residence name, address, weekly rent, included bills, deposit, travel time to campus and booking status. AUD 220 per week is still only a planning estimate.

5. Your visa application

Confirm whether you applied or plan to apply yourself or through an agent. If using an agent, provide the name. Confirm any previous visa refusals or relevant travel history before adding an answer about them.

6. Your employment evidence

Confirm the exact legal name of Lead Company, employment dates and your current Nomad Internet role. Provide an experience letter or approved examples if you want project evidence. Azeem's Gtech Sources job and mobile-app links do not belong to you.

7. Your university comparisons

Confirm which universities and exact courses you personally considered. The linked comparisons are preparation examples, not proof that you applied. The reference's old fee lists need current course-specific evidence before use.

8. Your career and salary targets

Confirm your preferred roles, employers and realistic salary targets. Current job advertisements would support them. Azeem's salary ladder, job advertisements and claims about automatic promotion cannot be treated as your evidence.

9. Your property documents

Confirm ownership details against the property papers and sponsorship affidavit. The family home estimate is PKR 2 crore; other property prices remain omitted as requested. An updated AUD conversion can be added when finalising.

10. Any personal reasons still to add

Tell me any genuine experiences behind your preferences for Australia, Murdoch and overseas study. This will help make the final answers sound like you, rather than repeat another student's personal story.
